

RubberDucky

The EthPM - Geth integration we've been waiting for

Code Package and Delivery

RubberDucky will package a set of code, develop a report about the package, and publish the location of this package on Ethereum.

Stop copy and paste!

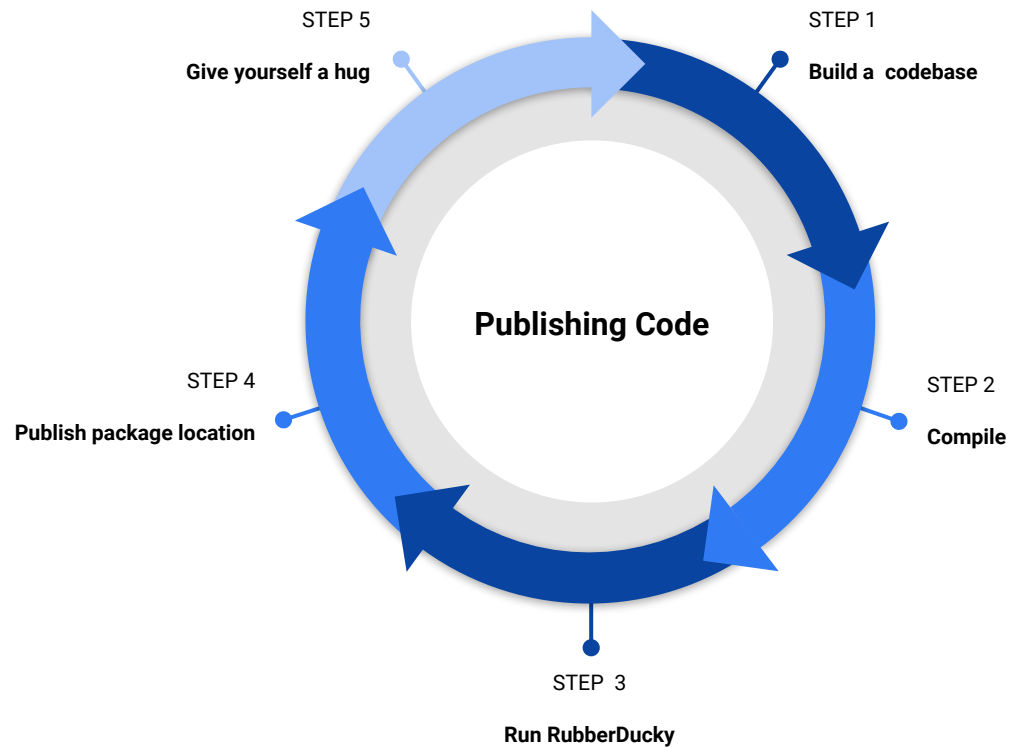

One major headache for Ethereum development is the inability to efficiently use shared codebases:

1. Using other package managers (npm)
2. Copying and pasting templates
3. No clear way to share code

Build on EIP 1123 & 1319

Reusable and a dependably constant codebase is foundational for development and native for Ethereum

1. Global network of code
2. Immutable
3. 'Easily' accessible

Future Upgrade
